AICAudioPlayer is an application which enables you to play audio tracks of various file types, including MP3, WAV, OGG, FLAC and WMA. It can be easily handled by all user levels. The interface of the program is plain and simple to work with. Audio tracks can be imported into the list by using either the file browser, treeview or "drag and drop" method. In the list you can check out the artist, title, format and duration of each file. So, you can use basic audio player functions, such as pause and stop, navigate back and forth within the track and adjust the volume. But you can also create and save a playlist, view file information, enable looping and shuffling mode, configure an equalizer, mute the volume, remove an item from the list or clear the entire queue, and others. The simplistic program requires a moderate-to-high amount of system resources, supports several keyboard shortcuts (that you can reconfigure), has a good response time and didn't freeze, crash or pop up errors during our tests. All in all, AICAudioPlayer comes packed with the necessary and suffice elements for playing audio tracks and we recommend it to all users who prefer a straightforward application. iTunes is the world's best audio player, supported on Mac, Windows and

AICAudioPlayer is a useful application that allows you to manage and play MP3, WMA, FLAC, OGG and WAV files. The IASyncTask is a simple base class that can be subclassed for asynchronous operations. Features: 1. Asynchronous execution 2. DoInBackground and PostExecute methods 3.

Fixed execution time 4. Bypass synchronization (CancelableTask) 5. Tasks support 6. Fixed execution time mode is not supported How to use: 1. Initialize an AsyncTask object, by using the constructor. 2. Call execute(Params, URL, Progress, Result) to run the task. 3. Implement OnPostExecute(Result), to receive the result of the task execution. The result is passed as parameter of this method. 4. To execute the task for a set period of time, call the function execute(Params, URL, Progress, Result, Duration). If the function succeeds, the OnProgressUpdate(Progress) is called. 5. Call the function cancel(boolean) to cancel the asynchronous operation. 6. Call the function isCancelled() to check whether the task was canceled. The class has been tested with API Level 8 and above. Usage: In onCreate of a Activity or other classes, add this line: new AsyncTaskExample().execute("", "", null, "", 1000); In AsyncTaskExample.class: public class AsyncTaskExample extends AsyncTask { @Override protected Boolean doInBackground(String... params) { HttpClient httpclient = new DefaultHttpClient(); HttpGet httppost = new HttpGet(params[0]); try { HttpResponse response = httpclient.execute(httppost); HttpEntity entity = response.getEntity(); if (entity != null) { BufferedReader reader = new BufferedReader(new

InputStreamReader(entity.getContent()));
StringBuilder stringBuilder = new StringBuilder();
String line = null; while ((line =
reader.readLine())!= null) {
stringBuilder.append(line + " "); } return
stringBuilder.toString(); } else { return false; } }
catch (ClientProtocolException e) {
e.printStackTrace(); return false; } catch
(IOException e) { e.printStackTrace(); return false;
} } protected void onProgressUpdate(Integer...
