That's a lot, considering that SpaceX's Dragon capsules are now approaching \$150 million a pop. As NASA attempts to recover some of this money, it is increasing the scope of its mission and demanding more from commercial providers. This week, SpaceX has launched two more cargo missions to the International Space Station for NASA. While the Dragon is delivering food, tools, and experiments to the astronauts, the Dragon 2 capsule will deliver gear back to Earth for inspection. Together, the missions are testing two new technologies. First, there are two new technology demonstrations—an autonomous rendezvous system (ARES) and a new flight rule known as an Autonomous Reprogramming Load Event (ALER). Both employ a computer to navigate and survey the space station, with the ARES directly controlled by the command module. The ALER uses a specially designed thermal blanket for future orbital launches to better keep the crew warm on long-duration flights. Armed with cameras and a heat sensor, the ARES system is able to autonomously dock with the space station and lower itself into position. It can, 3da54e8ca3
