WinX Mask Crack 100% LoginThe present invention is related to a perforated tape for applying a graft or the like, comprising a plastic base material, a polymer, etc., and a method for producing a tape of this kind. From EP 0 781 511 B1 a double-sided adhesive tape is known which is used in forming a patch for application on a skin, for example on the forehead or the back of the hand. The adhesive tape comprises a plastic base material in the form of a thin roll, on which base material at least one side of a release-free adhesive layer and a covering layer is applied. The covering layer comprises the release-free side of the adhesive layer. According to the patent the covering layer is also provided on the side facing away from the adhesive layer and on the side facing towards the adhesive layer, and preferably also on the opposite side. The covering layer applied on the adhesive layer is a plastic foil that is applied by the user. The covering layer can be formed, for example, of polyvinyl or polyvinylidene acetate, polypropylene or polyethylene, polypropylene or polyethylene. These materials can have a thickness of 20 to 400 microns, but preferably 50 to 200 microns. Adhesive tapes of this kind are used preferably in the manufacture of patches for cosmetic and medical treatments, for example patches for bandages for skin burns, and patches for applying bandages for wounds to the skin, for example for fixing a bandage for a wound by adhesive force, e 1cb139a0ed
