The following techniques demonstrate how to use Photoshop's various tools to manipulate images. See How To Use Photoshop's Tools for further tips and techniques.

**Step 1: Preparing a Clear Background** This basic feature enables you to manipulate the background of a photo or other image without affecting the original photo's content. With the photo in your image, choose the Photoshop Layers panel by clicking on the View icon on the top tool bar or by pressing Alt+Spacebar. Alternatively, you can right-click on an image and click on "Show Layers Panel." In the Layers panel, at the bottom of the panel, click on the Background layer (see image at right). The layer at the bottom will then be selected and all the other layers will be deselected. In the Layers panel, press the Delete key to remove the background layer.

**Step 2: Thicken Your Photo's Background** By default, the background of any selected layer is 100% transparent. This means that the top layer of the image will only appear where the transparent background meets the object. To make the background thicker, simply hold the Shift key and use the Transform palette's Width or Height tools. To add a thick background to more than one layer, click once on the topmost layer in the Layers panel. Then, use the Transform palette to adjust the width or height. All the layers beneath the top layer will be scaled proportionally.

**Step 3: Remove the Background from a Layer** Remove the background from a layer by going to Layer | Background | Clear. Select the layer in the Layers panel and press "Delete." If you don't clear the background, the layer will still be considered to have a background. An image will still show at the bottom of the layer regardless of whether the background has been removed.

**Step 4: Increase the Opacity of an Object** Opacity allows for a color to be partially visible. With opacity, it is possible to make an object partially transparent, but the underlying image is still visible. Increase the opacity of an object by either: Selecting the layer and choosing Layer | Layer Properties | Transparency. or by dragging the Opacity icon at the top toolbar (see image). Change a photo's opacity by selecting the layer in the Layers panel and pressing the eye icon on the tool bar. Another method to increase opacity is to make a

• After a run of 10 games without a win, the Panthers arrived in Jacksonville to face the Jaguars in an AFC South showdown. This would be the first time the teams would meet. • The Panthers recorded their first victory of the season, 17-10, after a wild game of special teams. • Vontae Davis' punt return for a touchdown was the first punt return touchdown in the NFL this year. • The Panthers extended their record-breaking streak of home games without a loss to 12 (includes Week 7 of the 2012 season when they won, 28-0). • Pro Bowl QB Cam Newton recorded his third consecutive game with a total of 300 passing yards. • Taking his first snap as a pro, WR Ted Ginn Jr. had an impressive 46-yard catch and run. • After a three-year extension, TE Brandon Williams became a free agent and signed with the Jaguars. • After the Panthers' initial drive, the Jags went 80 yards for a touchdown, to start the game. • This was the first game in which the Jags held an opponent under 30 points since Week 6 of the 2010 season. • Both QBs passed for 150 yards. • With 94 yards, RB Marrone became the first Panther to rush for 100 yards against Jacksonville since Week 11 of the 2011 season.

How To Use Client Data For Your Marketing Campaigns Maybe you're in the same boat as all those marketers who are asking themselves: How can I use data to drive marketing strategy? Like all marketing, data marketing is about understanding the ways that we interact with the world - and particularly how those interactions shape a brand. Data marketing takes that insight and translates it into actionable ideas. However, no matter how much data you have, it's unlikely you'll be able to find some category that has data that's perfect for your brand. In fact, the data might not even be suitable - it's too old or too new. For instance, your ad traffic that you're trying to optimise might be geared towards people who live in the US. And your email conversion rates might have been a bit low before 2014 so it might be worth focusing on data from that year. (Unless, of course, your customer data is driven by a similar email conversion rate.) Or your website's visitors might be from

## What's New In?

PASADENA, Calif. — Laura Beal's family took a history-making trip to North Carolina. They drove the Camaro they had taken to the Pitt-Johnston K6JH from Pitt to a museum at Glenville High School (Glenville, N.C.) where the actual car sits. During Laura's sophomore year, her father came up with a school project for his daughters. "He decided that since they were going to spend a semester overseas, he wanted the girls to visit their family in a place they had never been," says Beal. But rather than go to Mexico, they went to North Carolina. "It was really exciting for them. It was like they had won the lottery," says Beal. The family, including Laura and her stepmother, Cathy, and brother, Gary, was part of a history-making trip. It was the first time a family from the United States took an American Camaro to North Carolina, the country of its namesake.

The invention relates to a wound sewing machine, comprising a sewing machine frame; a sewing machine main shaft driven by a driven shaft, wherein the sewing machine main shaft is driven in a first direction of a first rotation axis in a rotational range corresponding to a stitch seam, and driven in a second direction of a second rotation axis in a range corresponding to a gap between stitches. The sewing machine according to the

invention comprises a locking device that is capable of locking the sewing machine main shaft at a stop. Patent publication EP 0 694 517 A1 describes a control system for a sewing machine with a cutting knife and a sewing needle. By means of a controllable actuator in the form of an electrical switch, the control system opens and closes a main shaft of the sewing machine. This permits the main shaft to continue to move a stitch gap if the control system is switched off. Patent publication U.S. Pat. No. 5,933,900 A describes a sewing machine in which the needle is driven by a first drive device and the cutting needle by a second drive device. The first and second drive device have an actuator that is coupled to the first and second drive device to lock the sewing machine. The actuator is capable of being brought into an unlocked state by virtue of a sensor. In a known sewing machine, it is possible for a sensing and control device
