Improvements in the VBA language have made it possible to write programs that do not have to be called from the user interface (UI), but can run from the system's startup code. The AutoCAD Free Download object model allows such programs to be built directly from code using automation techniques, rather than using macros. In 2010, the company released the AutoCAD 2010 Add-in architecture, a specification of how AutoCAD 2010 applications can be written. Through the use of this architecture, AutoCAD 2010 applications can be written to be plug-and-play with any Windows version from XP onward. AutoCAD also exposes its architecture as a COM interface. Dynamics, PowerBuilder, Excel, Access In the early 1990s, it added a module for VisiCalc, which became known as the VisiCalc SDK. In 1993, VisiCalc was purchased by Microsoft; from 1995 onwards, the VisiCalc SDK was ported to Visual Basic. The core of the VisiCalc SDK was the NDesk.VCL, which was released to the public domain in July 1996. VisiCalc

continues to be supported by the company, and the VisiCalc SDK is still available for development. In 1995, this was followed by the Microsoft Office Automation API (MOA), which exposes the Windows application programming interface (API) to VBA (Visual Basic for Applications). From the late 1990s, the technology and products developed by the company for the automation of Microsoft Office applications, including Word, Excel and PowerPoint, were branded with the name Microsoft Office Extensibility Initiative (MOXI) or, simply, Extensibility. In 1997, Excel was the first of these products to be sold, and was later expanded to support Outlook and Access in 1998. The Excel Extensibility technology allowed third parties to create applications that could access and control Excel. Third-party solutions include XLS Tools, DataPower and others. Office also supported Intellisense, a static programming interface for Microsoft Visual C#. In 1998, Microsoft began a continuous process of improving the API, with a major revision in 2001, followed by another in 2003, and yet another in 2007. In the late 1990s, Microsoft Corporation and 3D Realms released the Source engine game engine, which used the DirectX API. The implementation was open source, but in 2000, Microsoft sued 3D Realms for copyright violations and the DirectX code was removed from the ca3bfb1094

Rearrangement inequality for univalent functions In the proof of  $R(f(z_0), f(\frac{1}{z_0}), \frac{1}{f'(z_0)})$  is less than  $R(z_0, \frac{1}{z_0}, 0)$ , the author writes that  $|f(z_0)|$  WO-2008/122556 discloses a method for determining the quantity of reagents for a chemical reaction, in which reagent mixtures containing at least one reagent, which is chemically reactive with respect to the reagents, and a number of diluents, as well as a reaction product of this chemical reaction, are prepared in a first step. Subsequently, a number of individual reagents, as well as the reaction product of this chemical reaction are prepared in a second step. The individual reagents and the reagents mixtures are reacted with one another in a reaction vessel and the quantity of reagents for the chemical reaction is calculated based on a defined yield criterion. In this case, the reaction mixture is characterized by an optical property, which changes due to the chemical reaction. The change of the optical property can be measured by means of a spectroscopic sensor and the quantity of reagents for the chemical reaction is calculated based on a reaction equation. The above-described method has a disadvantage in that the reagents are used up in the chemical reaction so quickly that the
