Zinc (Zn), magnesium (Mg) and iron (Fe) concentration and chemical fractionation were studied in the mineral soils of an environment where natural vegetation does not occur in the areas visited. The soils cover those of "Serra do Mar" in the northeast of Brazil (Pampa Serrana) and of "Manaus in Amazonia" in the northeast of the Amazon (Rondônia). The soils were strongly acidic and 80% of the acidity was from carbonate alteration. The mean extractable concentrations for Zn and Mg were 17 and 15 mg kg(-1), respectively. The concentrations of the elements were higher in the soils of the Pampa Serrana than in those of the Rondonia. The concentration of Zn and Mg in those soils that are acidic may be explained by the co-existence of large amounts of carbonate minerals. Zn-Mg soluble mineral complexes were detected in these soils, most probably because of the carbonate minerals. The chemical analysis of the soils showed that both elements were largely present as exchangeable fraction. In contrast, Fe was associated with carbonate minerals in both soils. The mineral composition of the soils, including the presence of carbonate minerals, significantly changed as the pH of the soils increased. However, the soluble fraction of Zn and Mg in the soils showed no pH-dependency, suggesting that these solubilities were controlled by other factors. As the soils of the Pampa Serrana and of Manaus in the Amazon were dry and non-acidic, we conclude that Zn and Mg solubility was controlled by charge neutralization in these soils.Q: Using object as react component Hello I have this problem, my problem is that I can't create an object as react component. Is there a library that allow me to this? Here is my object: import { HeightCard, WidthCard, } from '../shared/Card'; export const Choice = props => { const { width, height } = props.size; return(

Right now it displays all cells even if it is blank. function onEdit(e) { var spreadsheet = e.source.getActiveSpreadsheet(); var sheet = spreadsheet.getSheetByName("Sheet1"); var cell = e.range; var editedCellValue = sheet.getRange(e.range.row, e.range.column); if(editedCellValue.getValue()!= ""){ spreadsheet.getRange(editedCellValue.getA1Notation()).setValue(" "); } } For example, if I have something like "D2:E4" and "E2:E4" is blank, it will display "D2:E4" on the spreadsheet. A: For cell edit event try using below code. As you have not included the code in your question, I'm assuming below code is the one you are using. function onEdit(e) { var spreadsheet = e.source.getActiveSpreadsheet(); var sheet = spreadsheet.getSheetByName("Sheet1"); var cell = e.range; var editedCellValue = sheet.getRange(e.range.row, e.range.column); var value = cell.getValue(); if(value!= ""){ spreadsheet.getRange(editedCellValue.get
