## **The Tower Of TigerQiuQiu Bomber Tiger Description**

Othello is the oldest still popular game in the world - even today more than 500 million people play it. Probably every man knows of such a game as The Tower of Emperor. Even in the court of Monty Python, there were attempts to make this game every time more funny.

And today we have created another variation of the game in which you are able to fight in the battle line and destroy the opponent. The legend also carries a hint at the dreary seventies, because the tower was designed here as "Outpost of Tiger", with a legendary owner, who could afford to buy an army of tanks and bombers to protect his headquarters. The legend tells another version that this "outpost" was not only bombed but also there was a tiger in it, so the "tower of tigers" became the given name of the tower.

The game contains the 88 pieces and you will start for the fight, which is quite complex.

- You have to control your own tank and your own bomber that moves.
- As well as you have your opponent's tanks and bombers.
- You may select your tanks and bombers as you prefer.
- But before you make your each, select a type of your tank and your bomber, engine power, armor, weapon as well as it's type.
- More weapons and armor make you stronger in the fight.
