So I looked for an alternative and came across the app. I tried it

and I just love it. It works great for tracking my time by task, project, date, time or by client. I can also create a private project for the clients I work with. Its designed for individuals but it also has a team version that allows the team members to work on the same project. I also love the synchronization feature that allows me to sync all my projects with my online account on the Toggl web app. This is amazing for billing. I love the design of the app. Its sleek and minimalistic, but still looking modern. It has a beautiful interface and I really love how

quickly and easily I can add a task. It really is a great app and I'm sure it will help me stay on track and on budget. Pros -great for tracking your time by project, task, date, time or by client -syncs my projects with my online account on the Toggl web app -beautiful interface -easily add a task Cons -not perfect for accounting for your time, I use apple's Simple Time Tracking (\$3/month) and this app doesn't sync time with time tracking apps and it's a little more limited than I would like.
