BioWare has delivered some of the most critically acclaimed role-playing games ever made. As we near the end of the series, we've created a new universe to explore, expanded to include two new playable races and access to new areas, locales, and stories. Player choice shapes how your adventure unfolds in the distant future of the galaxy. Key Features: Choice and consequence - Every choice you make has a consequence. This usually includes your actions, your dialogue, and your reputation with other characters in the world. A New Universe - Explore two new planets and two new playable races as you make your mark on the galaxy. A Changing World - The intergalactic map that helps you navigate your journey is constantly changing as you encounter new worlds, levels, and story elements. Mix and Match - Let your imagination run wild and customize your character - make them look a little crazy or start with the basics. Interactive Narrative - Roleplaying games made of choices, consequences, and dialogue are at the heart of BioWare's philosophy and the hallmark of this series. Players choose the character they want to play as and are given a little bit of guidance through the story, but then how they ultimately play determines the fate of the galaxy.
