Although the menopausal status of the controls were not investigated, we hypothesize that the biological differences between menopausal and non menopausal women caused this difference. A potential explanation is that although women initiate sleep states differently than men, women initiate sleep and wake in a more rhythmic manner during the course of the night than men. Women

enter sleep significantly more often than men do in both *ad libitum* and sleep restricted conditions [@bib33]. Further analysis of the data yielded a simple relationship between body fat percentage and night time sleep efficiency ([Fig. 1](#fig1){ref-type="fig"}). This finding, which is consistent with previous studies, suggests that obese individuals are more likely to spend large portions of sleep in the transitioning phase of rapid-eye movement sleep, the portion of sleep in which wakefulness resumes after extended periods of sleep [@bib34]. Although the significance of this finding has yet to be established, the results of this study indicate that obese people are more likely to experience poorer quality of sleep.Fig. 1Fitting a simple regression between night time sleep efficiency and percentage of body fat (%BF). A positive relationship is seen between night time sleep efficiency and percentage of body fat. The menopausal and control groups are plotted separately.Fig. 1 Given that sleep loss has been shown to increase the risk of obesity [@bib35], it is not surprising that the obese individuals in this study would have lower night time sleep efficiencies than normal controls. However, sleep duration and sleep efficiency are not automatically related. Indeed, most of the literature analysing links between sleep and obesity has concluded that shorter sleep durations lead to the development of obesity. According to the American Academy of Sleep Medicine, sleep of seven hours or less can be linked to weight gain [@bib9]. In summary, while sleep loss is implicated in the development of obesity, there exists a relationship between obesity and short duration of sleep. While the literature appears to

Thanks what seems to be a promise of truth and development, we are shown grotesque shots of Native Americans living in deplorable conditions, a backlot of the Old West, a seedy love nest, and a reproduction of a recently destroyed church. As the War is drifting ever further from us, the idea of non-combatants being bound to the battlefield begins to appear less farfetched. The things of the battle could just as easily be present in the peaceful, American home. The Final Analysis – Take the
