---

upsides of CLI? In other words, are the benefits of having programming in CLI worth the extra work of picking up an interactive interpreter? A: There's nothing wrong with using interactive either: it's both powerful and easy to start. There are a few downsides to interactive: some environments do not play well with it, and may give you unhelpful error messages.

For example, MATLAB does not. interactive takes more time to start up. Python's interactive takes a long time to start, but at least you have a window where you can enter an expression. There's nothing in the way you express it that takes time: you write it, hit enter, and it's evaluated, and it's clear how much time is spent. interactive takes less time to quit, since it exits as soon as you have finished. You also have to think about how to exit
