Q: Is the (non-collapse) continuum hypothesis true? Can someone who knows this and has a copy of the book reference what is said about this? In particular, whether or not the title of the book is factually true? A: Non-collapse is true! Non-collapse is equivalent to Baire Category Theorem! (Which is stronger). This article gives us this great example By Baire Category Theorem, if $g(X) \geq 0$ is non-negative, then $\{x: g(x) > 0\}$ is in \mathfrak{c} . It is also called topological proof of this equivalence (See this answer). This proof uses Lusin's Nachbaur Theorem. This article (in particular, Section 8) gives examples of Baire category and non-collapsibility of continuum. This proof of non-collapsibility of continuum also uses Lusin's Nachbaur Theorem A: I don't know what "the book" is, but: $2^{\aleph_0} \leq \mathfrak{c}$ follows as an immediate consequence

Chronogram Editor | IDS Interests Chronogram Editor | IDS A: @neuromancer Is there an open source alternative? Nope. Well, not entirely. There is a Java-based library which lets you do some of the same things, but it doesn't allow you to build the full chronogram the way the Chronogram Editor does. I don't know who this library is by, but it's based on another project called Chrono. However, I'm curious as to what people perceive as a good alternative to Chronogram Editor. I would have to say that the project I mentioned above, Chrono, is an open source alternative. It's a great project, and the people who maintain it have been fantastic at keeping it up to date with the latest release of Java. It's also incredibly well documented on their
