Q: php Regex find, if find match return string I have a string like this... $str = "Hi, this is the best site I found all of time."; I found a website that generates a bunch of random strings, on the page they have this string... Hi, this is the best site I found all of time! I want a php regex to find the string and return all of the 'all of time', is this even possible? What have I tried.. I did get it to sort of work.. heres what I have $str = "Hi, this is the best site I found all of time."; preg_match("/all of time/", $str, $output); I am trying to get the string "all of time" and I can pass that into a function that will output the needed information; but it is not returning the $all of time at all.. A: You can write a PHP function to do exactly this: $str = "Hi, this is the best site I found all of time."; function split_message($message) { $result = preg_split("/(?
