Presets Guitar FxBox 2.5-2.6 (118 presets) free downloadQ: MS Access: Userform combobox has blank option selected, yet is filled with data I have an MS Access userform with 2 combo boxes filled with data from a query which is called when the form is opened. It will open and fill the comboboxes with data. The first combo box is not populated at first, but when you select an option the others are populated as expected. However, if the form opens and is initially closed, then the next time it is opened the first combo box has blank selected. So if you select anything from that first combo box, it makes no difference and the others drop down as expected. If the form closes and the next time opens, the first combo box is blank again. This happens regardless of if the form is opened or closed when the data is pulled. Its only happening with the first combo box. Any ideas? I've tried opening form code with this and it isn't changing anything. Private Sub UserForm_Open() With ds .Clear .OpenRecordset End With End Sub A: I don't know why it's happening but I've since found a work around. I'm reading data into the form as needed and reading it out of the form when you close the form. Private Sub UserForm_Initialize() If Me.Parent.Model![test] = "" Then Me.Parent.Model![test] = Me.TestCombo.Column(1) End If End Sub Private Sub UserForm_Terminate() If Me.Parent.Model![test] Me.TestCombo.Column(1) Then Me.TestCombo.Column(1) = Me.Parent.Model![test] End If End Sub Anomalous chiroptical properties of C60 and substituted metallocenes in a binary mixture. The chiroptical properties of the binary mixture consisting of C
