A: The behavior you describe seems to be the desired behavior for the http request. If that's what you want then you should be able to post the HTML response to the POST request to a test server. Edit: It turns out that in the HTTP 2.0 spec, the default behavior for a POST request is to cache the response, but if the request contains an If-Range header then the server is supposed to cache the response until it expires. The If-Range header is part of the Range request header, which allows the browser to only send the relevant part of the response to it's client. Here is the response from a curl request:

---

HTTP/1.1 200 OK Server: nginx  
Content-Type: text/html Content-  
Length: 43 Last-Modified: Tue, 31 Jan  
2013 05:35:30 GMT Date: Thu, 01 Feb  
2013 08:58:23 GMT Connection: keep-  
alive Vary: Accept-Encoding Cache-  
Control: no-store, no-cache, must-  
revalidate, post-check=0, pre-  
check=0 Pragma: no-cache 301  
Moved Permanently 301 Moved  
Permanently nginx/0.7.67 And here is  
the response from a browser: Content-  
Type: text/html; charset=utf-8  
Content-Encoding: gzip Content-  
Length: 1191 Connection: Keep-Alive  
Keep-Alive: timeout=2 301 Moved  
Permanently 301 Moved Permanently  
nginx/0.7.67 Here's the relevant text  
from the HTTP 2.0 spec: 10.1.1. POST  
9.3.1. Range requests The client  
sends the If-Range request-header
